(a) 3-ball of u, onion layers; size $= p^3_{uj}$
(b) probabilities p^w_{uj}
(b') law of $d(u, X_w)$
(c) coordinates of step w
u
$d = 1$
$d = 2$
$d = 3$
$w = 1$
$w = 2$
$w = 3$
Re $\phi^w_u(\theta)$
Im $\phi^w_u(\theta)$
$\|\Theta\|\, s^w_u$
θ log-spaced in $[1, 100]$; concatenated over $w = 1, 2, 3$: $3 \times 20 + 9 = 69$ coordinates
shade = magnitude; layer bars = mass at each distance
